

Hello, and nice to meet you! My name is Niclas. I started my career in IT as an apprentice IT system technician. However, my dream was always to move into software development rather than the hardware field of our profession.

That's why I decided to continue my career at msg nexinsure ag in Hamburg. In my first year at the company I was given the opportunity to learn many aspects about software development. This allowed me to discover my passion for the DevOps role to which I transitioned to after my first year and what I am still working as today.

After a couple of years I am now looking forward to a new challenge and want to make the next step in my development in this role.

## **EXPERIENCES**

DevOps Engineer

2020 - Present

msg nexinsure ag, Hamburg

2020 I started shifting into my first DevOps role. I was given the opportunity to automate our application server installation. That meant automating the installation of our own software, corresponding databases and a couple of third party applications. The entire project was developed with Ansible. These roles are still in use today and our basement for our entire onpremise automation.

Afterwards I was commissioned to migrate our entire code base from Subversion to Git. We successfully migrated more than 300 repostiories from SVN to Git. We took that opportunity to also move on from Jenkins Jobs to Jenkins Pipelines, including our own Jenkins Library.

During and after the continuous migration from SVN to Git we also started shifting into the container and Kubernetes world. This meant developing Kubernetes manifests and Docker images for our application and administrating a small rancher cluster with a couple of dozen nodes.

- Development of Kubernetes & Helm manifests
- ArgoCD
- Deployment pipeline (Maven, Jenkins Library, Groovy, Bash, Nexus)
- Ansible automation
- Continuous integration Branching & Releasing
- Building Docker images for our software builds and application servers
- · Grafana/Prometheus monitoring and alerting with alert manager
- Administrating hundreds of application servers (JBoss/Wildfly, WebSphere)
- Database administration (PostgreSQL, Oracle, DB2)
- Continuous migration from SVN to Git (Bitbucket) of 1.5M+ commits and more than 300 Git Repositories. Including the entire history and infrastructure (Nexus/Jenkins/Bitbucket etc.)

#### Associate IT Consultant

msg nexinsure ag, Hamburg

My first year mainly consisted of learning the software development process from scratch. Our team was involved in every part of the process. From the first commit and push to the repository, through the following deployment to our artifact repository and the deployment to our different application servers to the delivery to our customers we were responsible for the entire continuous integration. We also installed and administrated the different test-, dev- and prod-stages and administrated the entire infrastructure related to our development process and build pipeline.

In the second half of my first year I decided to rebuild our monitoring stack and used a Prometheus/Grafana/Alertmanager stack for this purpose. This stack is still active today and used by more than 400 colleagues.

- · Installation, configuration, administration and troubleshooting for hundreds of Jboss/Wildfly/WebSphere/Liberty Application Servers on Linux and Windows machines
- Installation, configuration, administration and troubleshooting for PostgresSQL, Oracle and DB2
- CI Pipelines with Jenkins and SVN
- Monitoring the infrastructure and alert management with
- Prometheus/Alertmanager/Grafana
- Automated releasing and branching with Maven, Git, SVN, Bash Scripting, Jenkins and Nexus Artefact Repository. Including databases.

## IT systems technician

2015 - 2019

2019 - 2020

During my 4 years at the company I was responsible for the administration of the Windows office infrastructure. We also managed the factory network and cash systems in more than 400 stores.

- Windows administration
- Factory network supervision

Heinrich von Allwörden GmbH, Mölln

- Vectron cash system administration and installation (remote and in person) • Succesfully transitioned the entire office infrastructure from Windows to Igel OS virtual
- desktops (finals project)
